# Compatibility Matrix

# Version Compatibility Matrix

This page provides a compatibility matrix listing the supported versions of iOS, Xcode, and macOS for building Trio. It helps ensure you are using the correct combination of tools and operating systems when creating your own version of Trio.

## Compatibility Matrix

 **iOS Version**

If your iOS version is not listed, e.g., 17.6.1, choose the first row that is less than your iOS version.

| iOS Version | Minimum Xcode Version | Minimum macOS Version |
|-------------|-----------------------|-----------------------|
| 18.1        | 16.1                  | 14.5                  |
| 18.0        | 15.4                  | 14.5                  |
| 17.5        | 15.4                  | 14.0                  |
| 17.4        | 15.3                  | 14.0                  |
| 17.0        | 15.0                  | 13.5                  |

 **Warning**

**Your phone's iOS dictates your macOS requirements**  
The more up-to-date you keep your phone's iOS, the more up-to-date your computer and macOS must be to build Trio with Xcode.

## Check your Software Versions
